Project Title: La La Land Website

I think I would like to build this site with multiple pages, one for each section of the content to allow for easier viewing of all the content on the site. I would like to have a navigation system at the top of the site that would link to each page within the site.

- **Home page/intro info:** I would like to give a brief introduction into when the movie was made, who directed it, and who starred in it. I would also like to include a brief summary of the plot here.
- **Plot:** A more in-depth synopsis of the plot would be detailed here
- **Cast:** Photos of the main cast members as well as brief descriptions of the characters they play
- **Production:** Idea conceptualization for the film; challenges faced when trying to produce the film; getting the green light to produce the film; aesthetic and conceptual preferences during filming (single take musical numbers, importance of setting); editing process.
- **Soundtrack:** List of songs with links to where to listen to them
- **Reception:** Box office; critical response; legacy; cultural impact; accolades
- **Sources:** cite Wikipedia page, reference pages for imagery, etc.
